DESCRIPTION

XTRA-SEAL GOLD Mineral is a plastomeric waterproofing membrane manufactured in an advanced continuous calendaring process by saturating and coating a synthetic carrier a waterproofing compound made of special grade of bitumen, modified with APP polymers. While the modifiers enhance the thermal, mechanical, and aging properties of membrane compound, the mechanical characteristics of XTRA-SEAL GOLD Mineral is produced using the non-woven continuous filament spun-bond Polyester carrier which acts as the reinforcement that provides the membrane with its particular tensile strength, tear resistance, puncture resistance and elongation properties. The upper surface of XTRA-SEAL GOLD Mineral is covered with grey /green/white/red mineral slates, whereas the lower face is laminated with a thermo-fusible polyolethylene film.

MAJOR FEATURES

- Good U.V. resistance.
- Improved chemical resistance to acidic and alkaline solutions.
- Enhanced thermal resistance under a wide range of temperature fluctuation,
- Adequate isotropic mechanical properties.

USES

XTRA-SEAL GOLD Mineral membranes are used in general purposes as general purpose waterproofing membranes in applications subject to moderate mechanical stresses in single or upper layer in multi-layer systems for a variety of waterproofing requirements. **XTRA-SEAL GOLD Mineral** membranes are particularly recommended for the following applications:

- Roofing or re-roofing works for sloped and flat protected roofs.
- Waterproofing of wet areas, mechanical rooms and terraces.
- Waterproofing of underground structures.

METHOD OF APPLICATION

XTRA-SEAL GOLD Mineral membranes are applied by using a propane torch or by mechanical fastening. The substrate surface must be clean, dry, smooth, and free of any irregularities. According to the surface conditions, a coat of water base primers may be required, prior to the applications of the membranes. **XTRA-SEAL GOLD** Mineral can be applied to the substrate fully bonded, semi bonded or loose lay, and the method of adhesion to the substrate shall be decided according to the waterproofing system design. Side laps should be from 12 – 15 cm. For more information on application refer to the **TECHNOBIT** Application Guide.

SURFACE FINISH

The lower surface of **XTRA-SEAL GOLD Mineral** is laminated with a Polyolefinic film while the upper surface is covered with one of the following surface finish materials:

Mineral slates

White

Grey

Green

Red

STORAGE & HANDLING

XTRA-SEAL GOLD Mineral rolls should be kept in an upright position in a flat, properly ventilated and sheltered storage area.

XTRA-SEAL GOLD
